IMPORTANT EQUINE HEALTH INFORMATION

Equestrian Sport Productions has had vaccination protocol in place since 2013. We will now adhere to GR845 in which:

At Federation licensed competitions horses, more than 7 months of age, entering the grounds must be accompanied by documentation of Equine Influenza Virus and Equine Herpes Virus (Rhinopneumonitis) vaccinations within six months prior to entering the stables. Horses not in compliance with this rule may be required to leave the competition grounds upon request by Competition Management. Documentation should consist of one of the following methods mentioned below. The frequency of vaccine administration should be per the vaccine manufacturers' or veterinarian's recommendations. It is recommended that vaccines are administered by or under the direction of a veterinarian.

2. In the case of vaccines administered by a veterinarian, the exhibitor, upon request by Competition Management, must provide documentation from the veterinarian on documenting that the horse in question received the vaccinations; name of the vaccines and date of vaccine administration.

3. In the case of vaccines administered by a person other than a veterinarian, the exhibitor, upon request by Competition Management, must provide a receipt of the vaccine purchase which is signed by the owner, or agent with care, custody, and control of the horse; name, serial number and expiration date of the vaccine; and date of vaccine administration.

4. In the case of a horse that is unable to receive either of the vaccinations due to a history of adverse reactions, the exhibitor, upon request by Competition Management, must provide a letter from the veterinarian on official letterhead stating that the horse in question cannot be vaccinated due to medical concerns and a log of temperatures taken twice daily for the seven days prior to entering the competition grounds. These horses must also have their temperature taken and logged twice daily while on the competition grounds.

The log of temperatures should be provided to the Competition Management, steward, or technical delegate when requested.

5. A current negative coggins test. Please renew before it expires, and not just before it is necessary to leave the state. It is strongly recommended that all horses be vaccinated for Equine EHV-1 (either modified live or killed vaccine) no sooner than 7 days prior and no later than 180 days prior to entering the show grounds. Most EHV-1 vaccines are only considered effective for 180 days. Check with your veterinarian about which vaccine you use.

6. Once the horse leaves the facility you may be required to show a new Statement of Health upon your return to the facility. Current vaccination against WNV, EEE, WEE, Tetanus and Rabies is strongly recommended

7. You should be able to document your horses normal temperature before arrival. Please do not ship horses with elevated temperatures. It is recommended that you establish a log of temperatures taken at least twice daily. If there is an elevated temperature for more than a 24 hour period, please consult your local Veterinarian immediately.

8. Every effort should be made to minimize stress and commingling of horses shipped long distances. Extra hours on a horse van, or moving from stable to stable is the fastest way to compromise your horses' and your neighbors horses' health.

9. Any horse on the show grounds with a fever of unknown origin or of suspicious origin must be reported to ESP Management. It is always better to err on the side safety. Isolation stalls will either be available on the grounds or at a local veterinary practice if the need arises.

10. Please take the time to review equine good hygiene practices and impress its importance to your groom in everyday care.

made with high performance fabric and stretch that won't give up on you. The knee grip system is supportive, yet subtle. Great seams and clever details.

RUBY RED

The crew neck sweatshirts, T-shirts, polos, hoodies and ball caps all showcase this fun pop of color. Partner ruby red in more styles made for your horse.

eqode by EQUILINE

EQUILINE has recently announced its brand-new, vibrant secondary line proudly named EQODE by Equiline.

Giorgio Armani has Emporio Armani Ralph Lauren has Polo Marc Jacobs has Marc by Marc Jacobs

And the list goes on ... High-end, luxury fashion houses have leveraged the art of introducing secondary lines to reach a broader clientele without compromising their reputation for decades. Likewise, Equiline with a wellestablished first line now joins the ranks adding Eqode as their second line. Designed to connect to a larger audience, by combining the best of EQUILINE's famous fit and performance; plus making new statements of its own, results in highly desirable and sought-after products.

EQUILINE's primary design team has made the designs simple, the introduction of new colors fun, trendy, and yes, the fabrics oh so comfortable and high-performance. The price tag is unique, and noticeably less than comparable EQUILINE styles.

Eqode fits well, feels good and has enough stretch to keep you looking your best while performing comfortably. There's nothing complicated about the equation; quality clothing, better prices equals exceptional outcome.

INDICATION: For the control of clinical signs associated with navicular syndrome in horses.

CONTRAINDICATIONS: Horses with hypersensitivity to clodronate disodium should not receive OSPHOS. Do not use in horses with impaired renal function or with a history of renal disease. WARNINGS: Do not use in horses intended for human consumption

HUMAN WARNINGS: Not for human use. Keep this and all drugs out of the reach of children. Consult a physician in case of accidental human exposure

PRECAUTIONS: OSPHOS has been associated with renal toxicity. PHELAUTIONS: USPHUS has been associated with reflat toxicity. Concurrent administration of other potentially nephrotoxic drugs should be approached with caution and renal function should be monitored. Use of bisphosphonates in patients with conditions or diseases affecting renal function is not recommended. Horses should be well-hydrated prior to and after the administration of DCMURG due to the actorizitie for adverse areal caused. Michor late Stout be well-lybrated prior to any the advance and any the advance of the advance of the potential for adverse renal events. Water intake and urine output should be monitored for 3-5 days post-treatment and any changes from baseline should elicit further evaluation. As a class, bisphosphonates may be associated with gastrointestinal and renal toxicity. Sensitivity for dng associated adverse reactions varies with the individual patient. Renal and gastrointestinal adverse varies with the information particular particular and gasu bintesular during reactions may be associated with plasma concentrations of the drug. Bisphosphonates are excreted by the kidney; therefore, conditions causing renal impairment may increase plasma bisphos-phonate concentrations resulting in an increase of kish for adverse reactions. Concurrent administration of other potentially nephrotoxic drugs should be approached with caution and renal function with the increase in the increase in the interview. angle should be applied and with calation and reliar function should be monitored. Use of bisphosphonates in patients with conditions or diseases affecting renal function is not recommended. Administration of bisphosphonates has been associated with abdominal pain (colic), disconfort, and agitation in horses. Clinical signs usually occur shortly after drug administration and may be associated with alterations in intestinal motility. In horses treated bio ORDMOC these additional intersement hor interiors of the set of the s associated with activations in micestrat micestrat models are to activate with OSPHOS these clinical signs usually began within 2 hours of treatment. Horses should be monitored for at least 2 hours following administration of OSPHOS.

Bisphosphonates affect plasma concentrations of some minerals and electrolytes such as calcium, magnesium and potassium, immediately post-treatment, with effects lasting up to several hours. Immediately Dost-dealment, with enects fashing up to several hours Caution should be used when administering bisphosphonates to horses with conditions affecting mineral or electrolyte homestasis (e.g., hyperkalemic periodic parakyisis, hypocalcemia, etc.). The safe use of OSPHOS has not been evaluated in horses less than 4 years of age. The effect of bisphosphonates on the skeleton of growing horses has not been studied; however, bisphosphonates

inhibit osteoclast activity which impacts bone turnover and may affect bone growth.

Bisphosphonates should not be used in pregnant or lactating mares, or mares intended for breeding. The safe use of 0SPH0S has not been evaluated in breeding horses or pregnant or lactating mares. Bisphosphonates are incorporated into the bore matrix, from where Bispinospinoliates are incorporated in the tite done mialty, inclusion where they are gradually released over periods of months to years. The extent of bisphosphonate incorporation into adult bone, and hence, the amount available for release back into the systemic circulation, is directly related to the total dose and duration of bisphosphor nate use. Bisphosphonates have been shown to cause fetal developmental abnormalities in laboratory animals. The uptake of the month of the statement of the statement of the systemic cause fetal developmental abnormalities in laboratory animals. The uptake of the statement of the st beroopmic at a binning of making of material bone may be greater than into material bone creating a possible risk for skeletal or other abnormalities in the fetus. Many drugs, including bigshopshonates, may be excreted in milk and may be absorbed by nursing animals.

Increased bone fragility has been observed in animals treated with bisphosphonates at high doses or for long periods of time. Bisphosbisphosphorates at high tooses of lot hold periods of mile. Bisphos-phonates inhibit bone resorbion and decrease bone turnover which may lead to an inability to repair micro damage within the bone. In humans, atypical femur fractures have been reported in patients on long term bisphosphonate therapy; however, a causal relationship has not been established.

ADVERSE REACTIONS: The most common adverse reactions reported in the field study were clinical signs of discomfort or ner-vousness, colic and/or pawing. Other signs reported were lip licking, yawning, head shaking, injection site swelling, and hives/pruritus. POST-APPROVAL EXPERIENCE (December 2018): The following adverse events are based on post-approval adverse drug experience reporting. Not all adverse events are reported to FDA/ CVM. It is not always possible to reliably estimate the adverse event frequency or establish a causal relationship to product exposure using these data.

The following adverse events are listed in decreasing order of reporting frequency: renal failure, polyuria, polydipsia, abdominal pain, ancrexia, lethargy, hypercalcemia, behavioral disorder, discomfort, hyperkalemia, hyperactivity, recumbency, hyperthermia, injection site reactions, muscle tremor, urticaria, hyperglycemia, and fracture. In some cases, death has been reported as an outcome of the adverse events listed above.

INFORMATION FOR HORSE OWNERS: Owners should be advised to NOT administer NSAIDs.
